#### Insert

```
public boolean insertUser(User user){    no usages
 connectToDb();
 boolean <u>sucesso;</u>
 String sql = "INSERT INTO usuario (nome, cpf) VALUES (?, ?)";
 try {
     pst = con.prepareStatement(sql);
     pst.setString( parameterIndex: 1, user.getNome());
     pst.setString( parameterIndex: 2, user.getCpf());
     pst.execute();
     sucesso = true;
 } catch (SQLException exc) {
     System.out.println("Erro: " + exc.getMessage());
     sucesso = false;
 } finally {
     try {
         con.close();
         pst.close();
     } catch (SQLException exc) {
         System.out.println("Erro: " + exc.getMessage());
 return <u>sucesso</u>;
```

## Update

```
public boolean updateUser(int id, User user){    no usages
 connectToDb();
 boolean <u>sucesso</u>;
 String sql = "UPDATE usuario SET nome = ?, cpf = ? WHERE id = ?";
 try {
     pst = con.prepareStatement(sql);
     pst.setString( parameterIndex: 1, user.getNome());
     pst.setString( parameterIndex: 2, user.getCpf());
     pst.setInt( parameterIndex: 3, id);
     pst.execute();
     sucesso = true;
 } catch (SQLException exc) {
     System.out.println("Erro: " + exc.getMessage());
     sucesso = false;
 } finally {
     try {
         con.close();
         pst.close();
     } catch (SQLException exc) {
         System.out.println("Erro: " + exc.getMessage());
 return <u>sucesso</u>;
```

### Delete

```
public boolean deleteUser(int id){    no usages
 connectToDb();
 boolean <u>sucesso</u>;
 String sql = "DELETE FROM usuario WHERE id = ?";
try {
     pst = con.prepareStatement(sql);
     pst.setInt( parameterIndex: 1, id);
     pst.execute();
     sucesso = true;
 } catch (SQLException exc) {
     System.out.println("Erro: " + exc.getMessage());
     sucesso = false;
} finally {
     try {
         con.close();
         pst.close();
     } catch (SQLException exc) {
         System.out.println("Erro: " + exc.getMessage());
return <u>sucesso</u>;
```

import java.util.ArrayList;

#### Select

```
public ArrayList<User> selectUser() {
 connectToDb();
ArrayList<User> users = new ArrayList<>();
String sql = "SELECT * FROM usuario";
 try {
    st = con.createStatement();
    rs = st.executeQuery(sql);
    System.out.println("Lista de usuários:");
    while (rs.next()) {
        User userAux = new User(rs.getString("nome"), rs.getString("cpf"), rs.getInt("id"));
        System.out.println("Nome: " + userAux.getNome() + " CPF: " + userAux.getCpf());
         System.out.println("----");
        users.add(userAux);
  catch (SQLException exc) {
    System.out.println("Erro: " + exc.getMessage());
 } finally {
     try {
        con.close();
         st.close();
         rs.close();
     } catch (SQLException exc) {
         System.out.println("Erro: " + exc.getMessage());
return users;
```
